Video Production

Video Production

Visual Eye Media offers a full range of services from video production to social distribution and duplication.

Pre-production: We'll fine tune your message, and develop a compelling script that exceeds your objectives. We'll develop a production budget and plan that includes assembling a professional crew and cast to make your video come to life. Finally, we'll present a schedule that will insure that your project is completed on time, and on budget.

Production: Our professional team will insure that all of the needed elements are in place to produce your video. Whether you need your video shot in High Definition, Beta SP, or MiniDV, we will supply the needed equipment and resources to insure that the content is captured to produce a stunning project.

Post-production: Once your video is shot, our professional editors will go to work assembling your video. From narration, to music, and graphics, our editors will bring all of the elements together to make your vision reality.

Social Distribution

After your video is finished, Visual Eye Media can help you put social media to work for you by distributing your video online. Sites like YouTube, Revver, and MetaCafe can attract thousands of eyeballs to your content via bloggers and viewers who can link, embed, and share your video.

VEM will convert your video to a web friendly format, set up your accounts, assign meta tags, and we can upload your video to a number of sites at once.

Duplication/Conversion

If you need multiple copies of a video, we provide duplication and video conversion. We can handle most formats including BetaSP, MiniDV, and DVD. Please call us for a quote.
