

# THE BEST CAMERAS FOR VLOGS - PODCASTS

by Amani Channel

I'm stepping up my efforts to engage in conversations via social media, and have decided to start producing video podcasts to help people create DIY podcasts and vlogs.

While I want people to use my video production services, not everyone can hire a professional crew. The fact remains, however that the equipment is more affordable than ever.

What you can't buy is experience and expertise, which is where I can help. This video is an answer to Twitter friend/follower musicfan214 who wanted to know: What camera is best for YouTube/iTunes?

Here is a short list of cameras you may want to consider. You may want to shop around. I found some alternative prices online.

1. Flip Camera Ultra - Standard Definition, no mic terminal, internal memory \$149.00
2. Flip Camera HD Mino, no mic terminal, internal memory \$199.00
3. Canon ZR960 Standard Definition, Mic terminal/Mini DV (tape format) \$250.00
4. Canon HD Camcorder FS/Vixia Series Hi-Def, flash memory mic terminal starting at \$299.00

-Amani Channel is available for media interviews, he can emcee, or speak at your next event. Channel is a Telly award-winning writer and producer. He's appeared on Fox News Channel, CNN, and has been a featured guest commentator on NPR. He is often asked to present at conferences, guest lecture at universities, lead panel discussions, and training sessions about journalism, new media, and video production. Call (404) 213-2121 for availability and booking.
